WARRANTY AND ASSISTANCE

All Belar products are warranted against defects in materials and workmanship. This warranty applies for one year from the date of delivery, FOB factory or, in the case of certain major components listed in the instruction manual, for the specified period. Belar will repair or replace products which prove to be defective during the warranty period provided that they are returned to Belar prepaid. No other warranty is expressed or implied. Belar is not liable for consequential damages.

For any assistance, contact your Belar Sales Representative or Customer Engineering Service at the Belar factory.

1 General Information

1-1 General Description

The Belar RFA-1A FM RF Amplifier is a crystal controlled, fixed frequency RF amplifier designed for use with Belar's complete line of FM monitors, including the FMM-1 series, the FMM-2 series, and The Wizard.

Local Oscillator and 10.7 MHz outputs are provided for use with the Belar FMM-4A Frequency Monitor for continuous off-air frequency measurement.

1-2 Physical Description

The RFA-1A is constructed on a standard EIA 1 $\frac{3}{4}$ x 19 inch rack mount panel (one EIA rack unit). Factory adjustments are located within the unit. The RF input, IF (650 kHz) output, L.O. output, and 10.7 MHz output are BNC connectors located on the rear of the unit. Two input attenuator switches and a crystal oscillator power switch are also located on the rear of the unit.

1-3 Electrical Description

The RFA-1A is a solid state superheterodyne type RF amplifier designed to accurately receive FM signals for measurement and monitoring purposes. It features a proprietary multi-stage IF filter and crystal-controlled pre-selector for maximum performance.

1-4 Electrical and Mechanical Specifications

RF Input Sensitivity	100 μ V
Signal-to-Noise Ratio:	
100 μ V input	75 dB
500 μ V input	85 dB
RF Input Impedance	75 Ω , BNC Connector
Input Attenuator	0, 6, 12, 18 dB
RF Frequency Range	87.75 - 107.95 MHz (specify frequency)
Outputs	650 kHz IF 10.7 MHz IF (input frequency + 10.7 MHz) LO
Capture Ratio	1.5 dB
Selectivity:	
Alternate Channel	27 dB
3rd Adjacent Channel	46 dB
Harmonic Distortion	< 0.03% @ 1 kHz, 75 kHz deviation
Separation with FMM-2 or Wizard Demod	
1 kHz	65 dB
15 kHz	55 dB
Dimensions	1 EIA Rack Unit 1.75"H x 10.5"D x 19"W
Power Requirements	100–240 Vac, 50–60 Hz, IEC-320 AC line inlet
Power Consumption	10 Watts
Shipping Weight	8 lbs (3.6 kgs)

2 Installation

2-1 Initial Inspection

Check the shipping carton for external damage. If the carton exhibits evidence of abuse in handling (holes, broken corners, etc.), ask the carrier's agent to be present when the unit is unpacked. Carefully unpack the unit to avoid damaging the equipment through use of careless procedures. Inspect all equipment for physical damage immediately after unpacking. Bent or broken parts, dents and scratches should be noted. If damage is found, refer to Paragraph 2-2 for the recommended claim procedure. Keep all packing material for proof of damage claim or for possible future use.

The RFA-1A is shipped with an instruction book, three wire line cord, four black rack mount screws, and a coaxial cable patch cord.

2-2 Claims

If the unit has been damaged, notify the carrier immediately. File a claim with the carrier or transportation company and advise Belar of such action to arrange the repair or replacement of the unit without waiting for a claim to be settled with the carrier.

2-3 Repacking for Shipment

If the unit is to be returned to Belar, attach a tag to it showing owner and owner's address. A description of the service required should be included on the tag. The original shipping carton and packaging materials should be used for reshipment. If they are not available or reusable, the unit should be repackaged in the following manner:

- a. Use a double-walled carton with a minimum test strength of 275 pounds.
- b. Use heavy paper or sheets of cardboard to protect all surfaces.
- c. Use at least 4 inches of tightly packed, industry approved, shock absorbing material such as extra firm polyurethane foam or rubberized hair. NEWSPAPER IS NOT SUFFICIENT FOR CUSHIONING MATERIAL!
- d. Use heavy duty shipping tape to secure the outside of the carton.
- e. Use large FRAGILE labels on each surface.
- f. Return the unit, freight prepaid. Be sure to insure the unit for full value.

2-4 Preparation for Use

The RFA-1A FM RF Amplifier is designed to be mounted in a standard 19-inch rack. When the amplifier is mounted above high heat generation equipment such as power amplifiers, consideration should be given to cooling requirements which allow a free movement of cooler air around the RFA-1A. In no instance should the ambient chassis temperature be allowed to rise above 45°C (113°F).

Units beginning with serial number 410215:

These units can be operated from a 100 to 240 Vac, single phase, 50-60 Hz power source with no user adjustments. The fuse should be a 5mm x 20mm type GMA-3, 3AMP-250V (UL/CSA) or T3.15A-250V (IEC) fuse only. A spare fuse is stored in the removable fuse compartment.

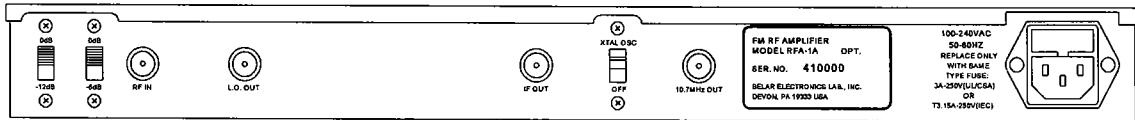

Units prior to serial number 410215:

These units can be operated from either a 105 to 125 Vac or 210 to 250 Vac single phase, 50 to 60 Hz power source. Make sure the unit is set for the proper voltage as follows:

Unplug the line cord. Open the fuse compartment door and pull lever to remove fuse. Using needlenose pliers, pull the voltage select board straight out of the power entry module. While facing the rear of the unit, orient the voltage select board so the desired line voltage is face up and reads correctly ("120" for 115 Vac operation, "240" for 230 Vac operation. The "100" and "220" positions on the bottom of the board are not used.) Reinsert the board into the power entry module, install the proper fuse (½A 250V for 115 Vac, ¼A 250V for 230 Vac), close the fuse door, and plug the line cord back in.

Connect the three-wire grounded line cord provided. If a substitute line cord is used, be sure that the ground lead is connected to "G" on the line cord receptacle.

2-5 Interconnections & Controls

RFA-1A Rear Panel Jacks and Switches

- RF IN** RF Input: connect your receiving antenna to this input.
- 0dB-6dB** These attenuation switches reduce the RF input level by 6 dB, 12 dB, or 18 dB. These switches may be used in high signal strength areas to prevent overload and for optimum signal-to-noise ratio.
- IF Out** IF output (650 kHz) for connection to the IF Input jack of Belar FMM-2 FM Modulation Monitor, or IF Input jack of The Wizard (with demod). Note that when operating the Belar FMM-2 with the RFA-1A, the IF Jack on the FMM-2 must be used and the RF/IF slide switch on the back of the FMM-2 must be set in the IF position.
- L.O. Out** Local Oscillator and 10.7 MHz outputs for connection to the Belar FMM-4A FM Frequency Monitor for measuring incoming frequency off-air.
- 10.7 MHz**

3 Operation

3-1 Initial Operation

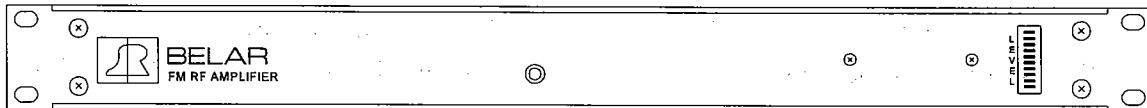

1. Connect your receiving antenna cable to the RF Input Jack on the back of the unit.
2. Connect the IF Output jack (650 kHz output) to the Belar FMM-2 FM Modulation Monitor IF Input jack, or The Wizard (with demod) IF Input jack.

Note: If you are using the Belar FMM-2, also move the RF/IF slide switch on the back of the FMM-2 to the IF position.

Note: If you are using the Belar FMM-1 (or RCA BW-75A), your FMM-1 will need modifications to accept IF input. See *Section 4*.

3. If using the RFA-1A with the Belar FMM-4A Digital Frequency Monitor, connect the L.O. and 10.7 MHz output jacks to the respective input jacks of the FMM-4A.
4. Ensure that units prior to serial number 410215 are set for the proper line voltage (see *Section 2-4*) and plug in the line cord.

3-2 Front Panel Indicators and Controls

The RF Level indicator shows the relative strength of the RF Input. At least 1 indicator bar should be lit in order to make most accurate modulation measurements.

4 Use with the Belar FMM-1 or RCA BW-75A

In order to use the Belar RFA-1A with the Belar FMM-1 (or RCA BW-75A), the RF input of the monitor must be modified to accept the 650 kHz output of the RFA-1A.

The purpose of this modification is to provide a direct connection to the IF input on the A2 card of the monitor.

Note: This modification disables the AM and incidental AM noise functions as well as the direct RF input function. No RF or OSCillator levels will be indicated on the modulation meter. No frequency deviation will be indicated.

1. Remove bottom cover.
2. Remove power to A1 card by unplugging the red lead to pin 1 on A1 and taping the end of the red lead to prevent shorts.
3. Remove the two orange leads from the INC. AM Noise Jack J5 and tape the ends.
4. Unplug the coax lead from pin 2 on A1 card and solder the lead to the center of J5. Do not solder the end of the clip, so you can restore original operation.
5. Remove one lead from the frequency meter M1 to make it inoperative. Tape the lead.
6. Replace bottom cover.
7. Remove the oven fuse F2 to disable the crystal oven.
8. Label **J5 650 kHz IF Input**.
9. Label the frequency meter **M1 NOT OPERATING**.

Reverse the steps to restore original operation.

5 Diagrams, Schematics and Parts Lists

Replaceable Parts. This page contains information for ordering replaceable parts for the unit. The tables that follow list the parts in alphanumeric order by reference designation and provides a description of the part with the Belar part number.

Ordering Information. To order a replacement part from Belar, address the order or inquiry to Belar and supply the following information:

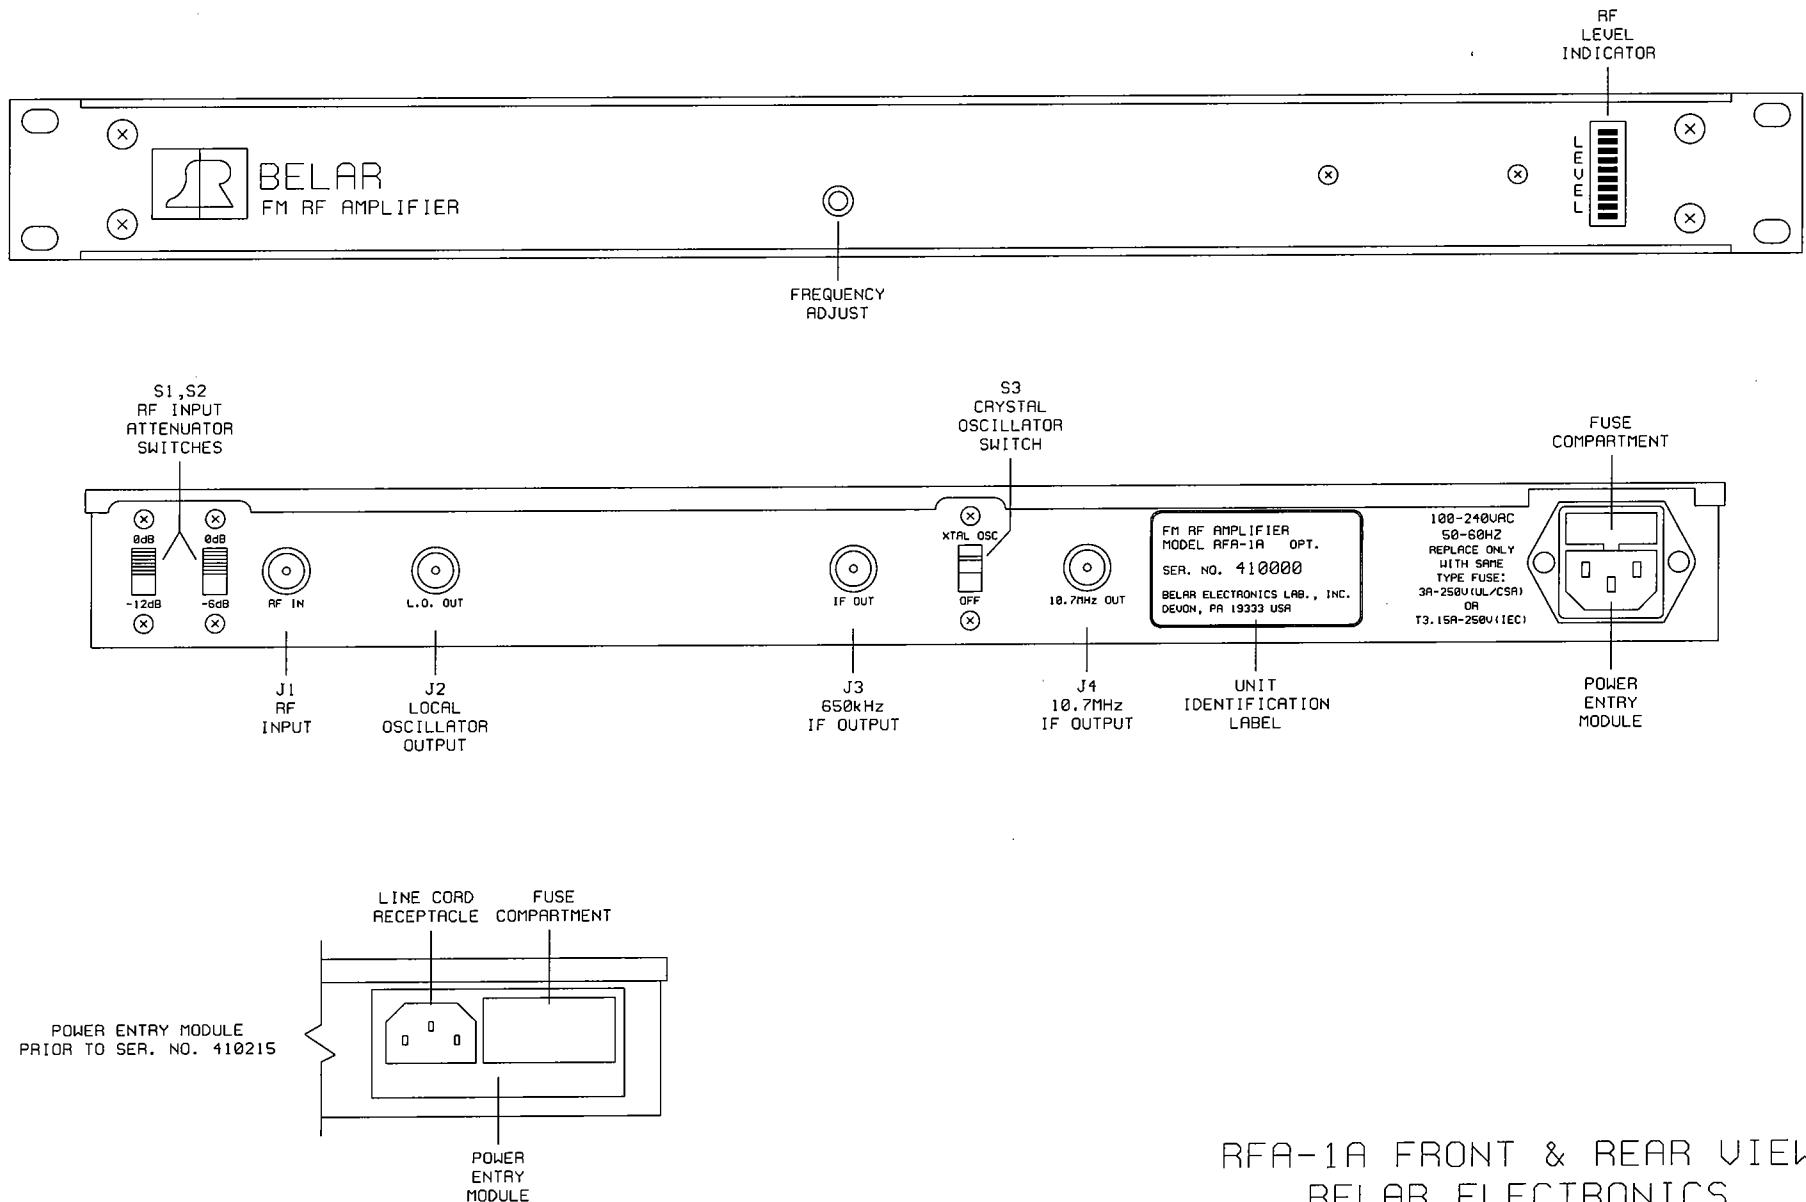

- a. Model number and serial number of unit.
- b. Description of part, *including the reference designation and location.*
