WARRANTY AND ASSISTANCE

All Belar products are warranted against defects in materials and workmanship. This warranty applies for one year from the date of delivery, FOB factory or, in the case of certain major components listed in the instruction manual, for the specified period. Belar will repair or replace products which prove to be defective during the warranty period provided that they are returned to Belar prepaid. No other warranty is expressed or implied. Belar is not liable for consequential damages.

For any assistance, contact your Belar Sales Representative or Customer Engineering Service at the Belar factory.

TVM-230 Digital BTSC TV Stereo Monitor/Analyzer

1 General Information

1-1 General Description

The Belar TVM-230 Digital BTSC TV Stereo Modulation Monitor and Analyzer is a DSP based precision stereo monitor designed to operate in conjunction with the Belar TVM-100 or TVM-101 Precision Aural Monitor or other source of wideband aural composite.

The TVM-230 digitizes the composite and decodes the stereo multiplex signal using digital signal processing techniques. Unlike an analog design, a DSP based design is not subject to variations due to temperature, component aging, or component tolerances. The resulting circuit requires virtually no adjustments, but can achieve extremely tight tolerances. In addition, the DSP design allows the use of FIR linear phase filters which eliminate phase distortion. The elimination of phase distortion allows the TVM-230 to measure modulation peaks on the Left, Right, L+R and L-R more accurately than with traditional techniques. All of these advances are possible because a design implemented using DSP is strictly a matter of software.

The TVM-230 also digitizes all measurements. By digitizing the measurements the user can display modulation peaks, injections, and dB readings directly. As an added benefit, all readings can be viewed remotely using a personal computer. The ability to display measurements remotely will make a remote proof possible when the TVM-230 is combined with a distortion analyzer such as the Audio Precision.

1-2 Specifications

Inputs Two wide-band demodulated aural composite, selectable from front panel
Input Level 1.0V to 2.0Vrms for 73 kHz peak deviation
Input Impedance 100 kΩ, unbalanced BNC connector

Outputs

Left and Right
 Audio Active 50 Ω Balanced Output
 Level: +10 dBm into 600 Ω, XLR connector
 Test 2.5 Vrms, 75 Ω, unbalanced, BNC connectors
 Scope(auto-ranged) 1.3 Vrms, 75 Ω, unbalanced, BNC connectors
Pilot Output 2V P-P, 500 Ω, unbalanced, BNC connector
dbx Level 3.5355 Vrms for 50 kHz L-R deviation, BNC connector

Interface:

Serial Interface RS-232, DB-9 connector
Unit Interface Wizard Standard Interface

Remote Meter Outputs:

For interface to optional Model MP-230 Analog Remote Meter Panel
Analog Meter Outputs for Left, Right, L+R and L-R channels
Open Collector outputs for Stereo Peaks Per Minute (PPM), L+R PPM and Pilot
Relay closures for Stereo PPM, L+R PPM and Pilot

The Wizard System

Separation + Noise

Equivalent Mode	70 dB, 50 to 14 kHz
BTSC	Exceeds EIA MTS recommended practices for monitoring equipment. Typical separation at 100% 75 μ second equivalent input modulation:
50 kHz to 8 kHz	greater than 40 dB
8 kHz to 12 kHz	greater than 35 dB
12 kHz to 14 kHz	greater than 30 dB

Crosstalk + Noise:

L+R to L-R	75 dB (50 Hz to 14 kHz)
L-R to L+R	75 dB (50 Hz to 14 kHz)
SAP to L+R	75 dB
SAP to L-R	75 dB
PRO to L+R	75 dB
PRO to L-R	75 dB

Frequency Response (Left and Right channels)

Equivalent Mode	± 0.05 dB (50 Hz to 14 kHz)
BTSC:	
Typical at 100% 75 μ second equivalent input modulation	within ± 0.1 dB (50 Hz to 14 kHz)
Typical between 10% and 100% 75 μ second equivalent input modulation: 50 Hz to 8 kHz	within +0.05 dB to -0.02 dB
8 kHz to 14 kHz	within +0.05 dB to -0.35 dB

Signal to Noise Ratio:

(L, R equivalent mode, pilot on)	
No de-emphasis	75 dB
De-emphasized, 75 μ second	85 dB

Distortion + Noise

Harmonic Distortion: (50 Hz to 14 kHz, measured across 30 kHz bandwidth)	
Equivalent Mode	0.025%
BTSC	0.1%

Signal Input-to Output Delay

5 milliseconds

Dimensions

1 EIA Rack Unit 1.75" H x 17" D x 19" W

Power Requirements

30 watts, 100-240 VAC, 50 to 60 Hz

Shipping Weight

13 lbs (5.9 kgs)

TVM-230 Digital BTSC TV Stereo Monitor/Analyzer

2 Unpacking

2-1 Initial Inspection

Check the shipping carton for external damage. If the carton exhibits evidence of abuse in handling (holes, broken corners, etc.) ask the carrier's agent to be present when the unit is unpacked. Carefully unpack the unit and inspect all equipment for physical damage immediately after unpacking. Bent or broken parts, dents and scratches should be noted. If damage is found, refer to Paragraph 2-2 for the recommended claim procedure. Keep all packing material for proof of claim or for possible future use.

The TVM-230 is shipped with a Guide to Operations, 4 black rack-mount screws, a BNC jumper, and a three-wire line cord.

2-2 Claims

If the unit has been damaged, notify the carrier immediately. File a claim with the carrier or transportation company and advise Belar of such action to arrange the repair or replacement of the unit without waiting for a claim to be settled with the carrier.

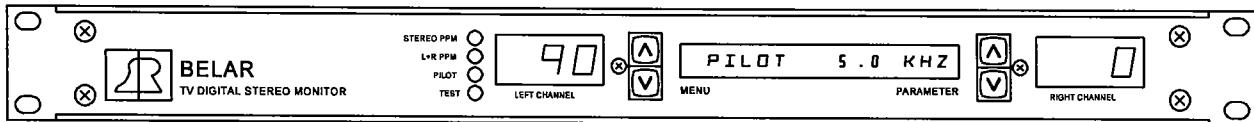

2-3 Repacking for Shipment

If the unit is to be returned to Belar, attach a tag to it showing owner and owner's address. A description of the service required should be included on the tag. The original shipping carton and packaging materials should be used for reshipment. If they are not available or reusable, Belar can provide a replacement box and packaging at a nominal cost. Alternatively, the unit should be repackaged in the following manner:

- a) Use a double-walled carton with a minimum test strength of 275 pounds.
- b) Use heavy paper or sheets of cardboard to protect all surfaces.
- c) Use at least 4 inches of tightly packed, industry approved, shock absorbing material such as extra firm polyurethane foam or rubberized hair. **Newspaper is not sufficient for cushioning material!**
- d) Use heavy duty shipping tape to secure the outside of the carton.
- e) Use large **FRAGILE** labels on each surface.
- f) Return the unit, freight prepaid. Be sure to insure the unit for full value.

The Wizard System

3 Front Panel Operation

The yellow **TEST** LED is illuminated when the unit is EQUIValent mode (instead of MTS mode) or if the dbx¹ expander is switched out, or both.

The green **PILOT** LED is illuminated when the unit detects the 15.734 kHz pilot. At least 3 kHz injection is required to illuminate this light. If the TVM-230 has the optional Pilot Sync detector circuit installed and enabled, then this LED will blink if a loss of frequency lock between the pilot and horizontal sync is detected.

The red **L+R PPM** LED is illuminated when the number of L+R Peaks-per-minute exceeds the user-defined threshold as described below.

The red **STEREO PPM** LED is illuminated when the number of Stereo composite Peaks-per-minute exceeds the user-defined threshold as described below.

The **LEFT CHANNEL** window displays the left channel modulation, expressed in percent modulation.

The **RIGHT CHANNEL** window displays the right channel modulation, expressed in percent modulation.

The **MENU/PARAMETER WINDOW** is a 16 character alphanumeric display that displays menu selections and associated parameters or measurements.

To the left of the Menu/Parameter Window, the **UP** and **DOWN MENU** buttons are used to scroll through the various menu selections of the TVM-230. The menu selections are arranged in two loops, one for measurements and one for settings. Either the UP or DOWN button will get you to your menu choice—but usually one direction will get you there quicker than the other.

To the right of the Menu/Parameter Window, the **UP** and **DOWN PARAMETER** buttons are used to scroll through the available settings for a given menu selection, where applicable. One loop, which includes the display shown in the figure above (your measured separation may be different, of course), consists of all of the measurements the TVM-230 can make, as well as the displays MODIFY PPM and MODIFY SETTINGS. Two other two loops (accessed by pressing the UP PARAMETER button at the MODIFY PPM and MODIFY SETTINGS windows, respectively) consist of all the setable parameters in the unit, such as hold time, time mode, etc. These parameters are all explained in *Section 3-2 MODIFY PPM Menu Selections* or *Section 3-3 MODIFY SETTINGS Menu Selections*, following.

¹dbx is a registered trademark of THAT Corporation.

TVM-230 Digital BTSC TV Stereo Monitor/Analyzer

3-1 Main Menu Selections

Below is a summary of all the menu selections available on the TVM-230.

TOTAL XXX %	Displays total peak modulation expressed in percent. The range is 0-127%.
STEREO XXX%	Measures the modulation level of the stereo composite (main plus stereo subchannel) with pilot. A 100% reading corresponds to 55 kHz deviation. This measurement is derived from the total measurement by subtracting out any SAP/PRO subcarriers which may be present. In order for the readings to be accurate, the SAP and PRO functions (described below) must be set correctly.
STEREO PPM	Displays the number of peaks per minute (PPM) of the stereo composite using a one minute sliding window. The level and duration of the peaks that will be counted can be set by the user, as described below under "MODIFY PPM".
L + R XXX %	Displays L + R peak modulation in percent. The range is 0-127%.
L + R PPM	Displays the number of peaks per minute (PPM) of the L + R using a one minute sliding window. The level and duration of the peaks that will be counted can be set by the user, as described below under "MODIFY PPM".
L - R XXX %	Displays L - R peak modulation in percent. The range is 0-127%.
PILOT X.X KHZ	Displays the Pilot Injection in kiloHertz deviation. The standard for setting pilot injection is 5 kHz.
<p>IMPORTANT NOTE: The following dB measurements are referenced to 0 dB = 100% modulation. DB measurements can be measured with or without de-emphasis. When the measurement is <i>with</i> de-emphasis, an asterisk (*) will appear after the DB in the menu/parameter window. Pressing the UP PARAMETER button lights the * to the right of the DB and shows the de-emphasized measurement. Pressing the down arrow turns off the * and the de-emphasis.</p>	
LEFT -XX.X DB*	Displays left channel modulation in dB.
RIGHT -XX.X DB*	Displays right channel modulation in dB.
SEP -XX.X DB*	Displays separation in dB. Note that this measurement is designed for use with test tones during a proof. It is not possible to determine separation while the unit is measuring program material.
L + R -XX.X DB*	Displays the L+R (mono) component of the stereo signal in dB.
L - R -XX.X DB*	Displays the L-R (stereo) component of the stereo signal in dB.

The Wizard System

XTALK -XX.X DB*	Displays crosstalk in dB. Note that this measurement is designed for use with test tones during a proof. It is not possible to determine crosstalk while the unit is measuring program material.
TOTAL -XX.X DB*	Measures total modulation in dB (0 dB = 73 kHz).
PILOT -XX.X DB*	Measures pilot injection in dB (0 dB = 73 kHz).
SUB -XX.X DB*	Measures the 31.5 kHz subcarrier suppression in dB (0 dB = 73 kHz).
MODIFY PPM	Press the UP PARAMETER arrow to enter the MODIFY PPM settings menu section. In this section are found a number of parameters that control the PPM indications and other settings, as described in <i>Section 3-2 Modify PPM Menu Selections</i> .
MODIFY SETTINGS	Press the UP PARAMETER arrow to exit the measurement section of the TVM-230 and enter the parameter settings section of the unit. The parameter section is where you configure the unit to your preferences. The parameter settings are described in <i>Section 3-3 Modify Settings Menu Selections</i> .

3-2 MODIFY PPM Menu Selections

SAP - ON/OFF/AUTO	This setting determines what offset is subtracted in order to correctly normalize the STEREO modulation reading. In the OFF mode, no offset is subtracted (the monitor assumes no SAP is present). In the ON mode a 15 kHz offset is subtracted (assumes 15 kHz SAP injection). In the AUTO mode, which requires a Belar TVM-250 SAP/PRO Monitor, the unit dynamically subtracts the actual SAP injection as measured by the TVM-250.
PRO - ON/OFF/AUTO	This setting determines what offset is subtracted in order to correctly normalize the STEREO modulation reading. In the OFF mode, no offset is subtracted (the monitor assumes no PRO is present). In the ON mode a 3 kHz offset is subtracted (assumes 3 kHz PRO injection). In the AUTO mode, which requires a Belar TVM-250 SAP/PRO Monitor, the unit dynamically subtracts the actual PRO injection as measured by the TVM-250.
ST PEAK XXX%	Sets the level of stereo composite that will be counted as a peak. A setting of 100% is equivalent to 55 kHz deviation.
ST THRES XX	Sets the threshold number of peaks-per-minute (PPM) required to activate the "STEREO PPM" LED and relay. If the Stereo PPM count exceeds this number, the LED lights and the relay is activated.
ST DUR XXX MS/TRACK	Determines the duration of what will be counted as one peak. No matter how many peaks exceed the threshold in the PPM DURATION time, only one will be counted. This is user selectable from 10 ms to 500 ms, plus TRACK. In the TRACK mode the duration is set to the same as the HOLD time.

TVM-230 Digital BTSC TV Stereo Monitor/Analyzer

L+R PEAK XXX%	Sets the level of L+R that will be counted as a peak. A setting of 100% is equivalent to 25 kHz deviation.
L+R THRES XX	Sets the threshold number of peaks-per-minute (PPM) required to activate the "L+R PPM" LED and relay. If the L+R PPM count exceeds this number, the LED lights and the relay is activated.
L+R DUR XXX MS/TRACK	Determines the duration of what will be counted as one peak. No matter how many peaks exceed the threshold in the PPM DURATION time, only one will be counted. This is user selectable from 10 ms to 500 ms, plus TRACK. In the TRACK mode the duration is set to the same as the HOLD time.
EXIT ?	Press the UP PARAMETER arrow to exit the parameter setting section of the TVM-230 and enter the measurement section of the unit. The measurement section is where the unit displays most of its measurements (pilot injection, etc.).

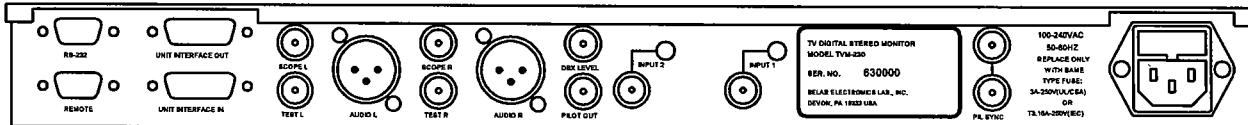

3-3 MODIFY SETTINGS Menu Selections

HOLD XX.X SEC	Determines the interval that readings are updated on the display when in past time. Also selects the length of time that the display is held when in real time. This is user selectable in 0.5 second increments from 0.5 to 10.0 seconds, plus EXT. HOLD - EXT is an external sync and should be used when the unit is interfaced with another unit in The Wizard System and it is desired that the other unit be the "master" or controlling unit. In this case the hold time is controlled by the other unit. When multiple units are connected together through the Wizard Interface, one unit should be considered the "master" unit and the other units should be considered "slave" units, and have their HOLD time set to EXT.
TIME MODE - REAL/PAST	Determines the mode in which peaks are displayed. In REAL time mode the display is updated immediately as soon as a new peak is detected. In PAST time mode the unit waits the HOLD time and displays the highest peak which occurred in that interval.
INFINITE - ON/OFF	Enables or disables infinite hold of display. If infinite hold is enabled, the display acts as a "high water mark" and will "stick" at the highest modulation (until infinite hold is turned off).
REMOTE - ON/OFF	Enables or disables the RS-232 port. This allows users to enable or block remote access to the unit. Remote cannot be turned off while the unit is in remote mode (someone is communicating remotely). Remote also cannot be turned off remotely.
SAVE CONFIG	Allows the user to save all parameters to internal EEPROM so that the unit configuration is preserved when power is removed. Press the UP PARAM to save the configuration.

The Wizard System

LOAD CONFIG	Loads the entire set of operating parameters stored by the previous SAVE CONFIG command. This allows the user to easily restore any operating configuration after making alterations to perform tests or special signal evaluations.
MODE - MTS/EQUIV	Sets the stereo mode of the monitor. In MTS mode (normal operation), a 100% L-R reading corresponds to a 50 kHz deviation of the aural carrier. This is the proper mode of operation for the demodulation of BTSC stereo signals. In EQUIV mode, a 100% L-R reading corresponds to a 25 kHz deviation. This mode is used to demodulate a stereo composite signal similar to a conventional flat baseline FM signal. The TEST LED is illuminated in EQUIV mode.
DBX - IN/OUT	Switches the dbx expander and the de-emphasis and sum channel compensator for the L+R channel in or out. For proper demodulation of the BTSC signal the dbx function should be in. The TEST LED is illuminated when the dbx function is bypassed.
INPUT SEL - #1/#2	Selects the input source (jack 1 or jack 2). This can be used to easily and quickly switch the unit between 2 input sources, such as between a stereo generator and the TV aural demodulator.
SYNC DET - ON/OFF	This enables or disables the pilot sync detection circuit if this option is present (this is a factory-installed option). When enabled, a loss of frequency lock between the pilot and horizontal sync results in a blinking of the pilot LED.
EXIT ?	Press the UP PARAMETER arrow to exit the parameter setting section of the TVM-230 and enter the measurement section of the unit. The measurement section is where the unit displays most of its measurements (pilot injection, etc.).

4 Rear Panel

Input #1	Wideband aural composite, 100 kΩ, unbalanced, BNC Connector, 1.0 - 2.0 Vrms (2.8V - 5.7 V P-P).
Input #2	Wideband aural composite, 100 kΩ, unbalanced, BNC Connector, 1.0 - 2.0 Vrms (2.8V - 5.7 V P-P).
DBX Out	dbx input voltage. This is a sample of the L-R input to the dbx expander board. When the monitor is properly normalized, this voltage is 10 V P-P (3.5355 Vrms) for 50 kHz deviation (53.5 kHz deviation including pilot). 75 Ω source resistance.

TVM-230 Digital BTSC TV Stereo Monitor/Analyzer

Pilot Out	Pilot output, 2 V P-P, 499 Ω source.	
Audio L Audio R	Audio outputs (left and right), 600 Ω, balanced, +10 dBm, XLR-type connector. Pin 1 is ground, pin 2 is +, pin 3 is -. These outputs are de-emphasized when dbx is in operation and flat otherwise.	
Test L Test R	Test outputs (left and right), 2.5 Vrms, 75 Ω, unbalanced, BNC connector. These outputs are de-emphasized when dbx is in operation and flat otherwise.	
Scope L Scope R	Scope outputs, 1.3 Vrms, 75 Ω, unbalanced, BNC connector. When the respective measurement is below -50 dB, 30 dB of gain is automatically inserted for better resolution. The de-emphasis of these outputs follows the de-emphasis of the measurement. If the DB measurement is flat (no * to the right of the DB display on the front panel), the scope outputs are flat. If the DB measurement is de-emphasized (a * to the right of the DB on the display), the outputs are de-emphasized. The de-emphasis is set for 75 μsec de-emphasis unless 50 μsec was specified when ordered. The de-emphasis can be changed by moving jumpers P1 (Scope L) and P2 (Scope R) on the A1 board. For the location of these jumpers, see the <i>TVM-230 A1 Board Connections and Adjustments</i> drawing in Section 8.	

These outputs depend on which dB measurement the TVM-230 is displaying. A table of the dB measurements (as shown in the front panel MENU/PARAMETER window) and the respective scope outputs is shown below.

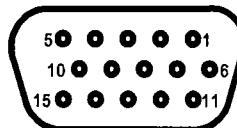

MENU	SCOPE L	SCOPE R
LEFT -XX.X DB	Left	Right
RIGHT -XX.X DB	Left	Right
SEP -XX.X DB	Left	Right
L+R -XX.X DB	L + R	L - R
L-R -XX.X DB	L + R	L - R
XTALK -XX.X DB	L + R	L - R
TOTAL -XX.X DB	Total	(grounded)
PILOT -XX.X DB	Pilot	31.5 kHz
SUB KHZ -XX.X DB	Pilot	31.5 kHz

Unit Interface In	This interface is used to connect to other units in The Wizard System for unified remote operation. Note that when the TVM-230 is connected to another Wizard System unit, such as the Belar TVM-250 SAP/PRO monitor, the HOLD TIME on all but one of the units in the chain should be set to EXT to all the units will be synchronized.
-------------------	--

The Wizard System

Unit Interface Out This interface is used to connect other Wizard-interface-equipped equipment, such as the Belar TVM-250 SAP/PRO Monitor to the TVM-230 for combined remote operation. The interface works in a daisy-chain configuration, with the first unit (say, the TVM-230) at the start of the chain, with its Unit Interface Out connected to the Unit Interface In on the next unit (say, the TVM-250). The Unit Interface Out of the TVM-250 is then connected to the Unit Interface In jack of the next unit.

Remote Meters This connector is used to connect the optional MP-230 Analog Meter panel to the TVM-230, or for other remote metering or monitoring applications. The meter panel displays Left Channel or L+R, Right Channel or L-R, and Pilot, Stereo PPM and L+R PPM LEDs. See *Section 5-1* for the MP-230 installation instructions.

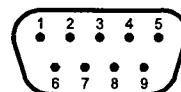

Remote Meters

The pinout of this connector is as follows (The MP-230 does not use all of the following pins):

Pin 1	Stereo PPM relay (when the LED is lit, Pin 1 and 2 are closed)
Pin 2	Stereo PPM relay
Pin 3	L+R Relay (when the LED is lit, Pin 3 and 4 are closed)
Pin 4	L+R Relay
Pin 5	Pilot Relay (when the LED is lit, Pin 5 and 6 are closed)
Pin 6	Pilot Relay
(Note: relays are rated at 10 W max, 0.5 A max, 200 VDC max)	
Pin 7	Stereo PPM (open collector)
Pin 8	L+R PPM (open collector)
Pin 9	Pilot PPM (open collector)
Pin 10	Left Remote Meter Out (+)
Pin 11	Right Remote Meter Out (+)
Pin 12	L+R Remote Meter Out (+)
Pin 13	L-R Remote Meter Out (+)
Pin 14	+5 V (25 mA max)
Pin 15	Ground

RS-232

The RS-232 connector is provided for direct computer communications with the TVM-230 for use with The Wizard Software. If you intend to write software to directly communicate with the TVM-230 using this port, refer to the *TVM-230 ASCII RS-232 Interface Commands* in *Section 7*.

RS-232
connector

Pin	Type	Description
1	input	CD Carrier detect from Modem
2	input	Rx The Wizard receive data
3	output	Tx The Wizard transmit data
4	output	DTR The Wizard data terminal ready
5	ground	GND signal ground
6-9		not used

TVM-230 Digital BTSC TV Stereo Monitor/Analyzer

PL Sync (2 jacks) (OPTIONAL)

These jacks are provided as a video loop-through, so the TVM-230 can determine whether your pilot is properly synchronized to your horizontal sync. If it is desired to have the TVM-230 monitor the frequency lock of the 15,734 Hz stereo pilot to the horizontal sync frequency, connect either a 1 V P-P composite video signal or a 4 V P-P horizontal sync signal to either of these jacks using a $75\ \Omega$ coaxial cable (RG-59). Since these two jacks are a bridging loop-thru input, the video (sync) line may be either looped to another destination or terminated at the TVM-230 with an external line termination.

5 Installation and Setup

The TVM-230 is designed to be mounted in a standard 19-inch rack. The unit can be operated from an 100 to 240 VAC single phase, 50-60 Hz power source, with no user adjustments. The fuse should be a 3A-250V (UL/CSA) or T3.15A-250V (IEC) fuse only. A spare fuse is stored in the removable fuse compartment.

Connect the three wire grounded line cord provided, or, if a substitute line cord is used, be sure that the ground lead is connected to "G" on the line cord receptacle.

Connect the output of your TVM-100/101 or other wideband aural demodulator to the desired input jack (#1 or #2). Since each input jack has its own level adjustment, this procedure should be followed for each input.

The presence of level dependent companding in the L-R channel of the BTSC system makes stereo separation performance directly dependent on the level match between the compressor output in the stereo generator and expander input in the stereo demodulator. For optimum operation of the TVM-230 stereo demodulator, and for best separation, it is important that the dbx expander in the unit be driven at an input level as close to that prescribed as possible. In the TVM-230 this is achieved by finely adjusting the input sensitivity to obtain the correct relationship between aural carrier deviation due to the L-R and L-R signal level at the input to the dbx expander.

Listed below, in order of preference (most preferable first), are the reference conditions for setting the input sensitivity and the reading required to confirm proper adjustment for each case.

Reference	Reading
A. 50 kHz deviation L-R (pilot not included)	3.5355 Vrms at DBX jack measured with high accuracy AC voltmeter
B. 50 kHz deviation L-R (pilot not included)	100% on L-R display
C. 25 kHz deviation L+R (sine wave)	100% on L+R display
D. 73 kHz deviation L+R (sine wave)	100% on Total display

The Wizard System

Using the internal calibrator, check the calibration of the discriminator and metering of the companion TVM-100 or TVM-101 aural monitor. If necessary, perform the adjustment procedure described in the TVM-100/101 manual.

To fine adjust monitor sensitivity, establish one of the reference conditions above. For cases A and B, apply a low distortion 1 kHz sine wave to the stereo generator with pilot turned off. Place stereo generator in test mode to produce an L-R signal (subchannel only). Adjust the audio level to the stereo generator to produce exactly 50 kHz deviation as indicated on the digital deviation indicator on the TVM-100. Turn on the pilot. (Because the pilot and the subcarrier do not reach their maximum values simultaneously, the peak deviation will now be approximately 53.6 kHz.) For method A, use a voltmeter whose input impedance is at least 1 Meg Ω and whose AC accuracy is better than 0.5% at 1 kHz. For method B, the L-R meter should be in the PEAK mode. Adjust R1 at the rear panel for the specified reading.

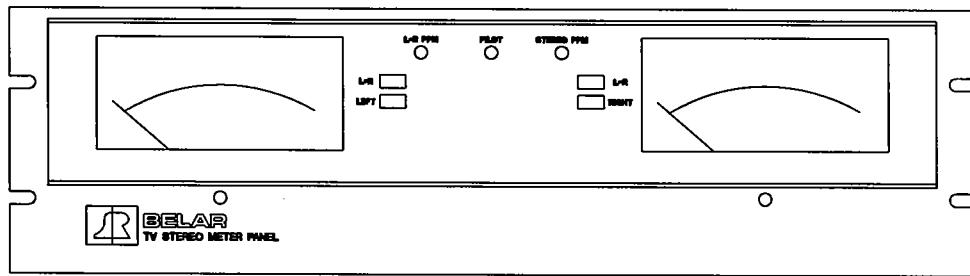

For methods C and D, apply a low distortion 1 kHz sine wave to the aural exciter. After checking the calibration of the TVM-100 as described above, adjust the level of the sine wave to achieve the prescribed deviation as indicated on the digital deviation indicator on the TVM-100. Read the appropriate display on the TVM-230 and adjust the appropriate input level adjustment at the rear panel for the specified reading.

IMPORTANT NOTE: Methods B, C, and D rely on initial factory set-up procedures and voltmeter stability to be effective. For this reason, method A is far superior to the other methods and is likely to result in a level normalization that is much more precise.

This procedure is not recommended if you have a Belar TVM-101 instead of a TVM-100. The TVM-101 does not have a digital deviation indicator.

5-1 Accessories

The optional MP-230 Analog Meter Panel, which consists of two large back-lit analog meters and two two-position switches, provides continuous analog metering of Left or L+R Modulation and Right or L-R Modulation as explained in Section 4 under "Remote Meters"

TVM-230 Digital BTSC TV Stereo Monitor/Analyzer

Before connecting the MP-230 to the TVM-230, ensure that the meters are at mechanical zero.

Using the interconnect cable (provided), connect the D-connector end of the plug to the remote meter connector (J1B) on the TVM-230. The other end of the cable should be connected to the terminal strip (TB1) on the back of the MP-230 as follows:

Terminal Number	Wire Color
1	Black
2	Red
3	Orange
4	Green
5	Blue
6	White
7	Orange/Black
8	Black/White
9	Red/White

MP-230 Line Voltage Selection Procedure:

1. Unplug line cord.
2. Open fuse compartment door.
3. Move fuse pull lever to left to remove fuse. Leave fuse pull lever in the leftmost position.
4. Using needle nose pliers, pull the voltage select board straight out of the power entry module.
5. While facing the rear of the unit, orient the voltage select board so the desired line voltage is up and reads correctly ("120" for 115Vac operation, "240" for 230Vac operation).
Note: The "100" and "220" positions on the opposite side of the board are not used.
6. Plug the voltage select board into the power entry module.
7. Install the fuse (F1).
8. Close fuse compartment door.
9. Plug line cord in.

Note: The MP-230 uses line power only to illuminate the meters. It is not required for proper operation of the meters.

MP-230 Calibration:

1. Feed a 1 kHz audio signal into the TVM-230 Composite Input.
2. Adjust the level of the audio so that the Left and Right Channel displays on the TVM-230 read 100%.
3. Depress the "Left" and "Right" meter panel pushbuttons.
4. Adjust potentiometers R1 and R7 on the rear of the MP-230 so the remote meters also read 100%.

The Wizard System

6 Running the Setup Program

To run the setup program, plug in the TVM-230 and press any of the keys located on the front panel while the INITIALIZATION message is being displayed. After a few seconds the TVM-230 will display a flashing RUNNING SETUP message as it enters the program.

6-1 Main Setup Menu Selections

RESET DEFAULTS ? Resets the TVM-230 to default factory settings including the passwords. Pressing the UP PARAMETER button will reset the unit to default settings. The default settings are as follows:

HOLD 1.0 SEC
ST PEAK 100%
ST THRES 10
ST DUR 10MS
L+R PEAK 100%
L+R THRES 10
L+R DUR 10MS
SAP - OFF
PRO - OFF
TIME MODE - PAST
INFINITE - OFF
REMOTE - OFF
DBX - IN
INPUT SEL - #1
SYNC DET - OFF
MODE - MTS

MODIFY OPTIONS? Press the UP PARAMETER button to enter the MODIFY OPTIONS submenu section. This submenu contains the settings related to the RS-232 and Unit Interface.

MODIFY ID ? Press the UP PARAMETER button to enter the MODIFY ID submenu section. This submenu allows the user to edit the units identification string.

UNIT INFO ? Press the UP PARAMETER button to enter the UNIT INFO submenu. This submenu displays the unit's serial number and EPROM version.

TEST RELAY /LED ? This submenu allows the relays and LEDS to be tested. Press the UP PARAMETER button to enter the TEST RELAY/LED submenu.

TVM-230 Digital BTSC TV Stereo Monitor/Analyzer

- TEST RS-232 ?** This submenu allows the RS-232 port to be tested. Press the UP PARAMETER button to enter the TEST RS-232 submenu.
- EXIT SETUP?** Exits the SETUP MENU and returns the unit to normal operation. Press the UP PARAMETER button to exit the setup program.

6-2 MODIFY OPTIONS SubMenu Selections

- BAUD RATE -
1200/2400/
4800/9600** Selects the baud rate for the RS-232 Port. This baud rate should be set to the same baud rate as the device the TVM-230 is being interfaced with.
- PASSWORDS -
ON/OFF** Enables/Disables password protection of the unit when it is accessed with The Wizard Software. If passwords are disabled the user will not be prompted to enter a password when establishing a connection with the unit. If the TVM-230 is connected to a external MODEM the passwords should be enabled to protect the unit from unauthorized users. If a direct or hard wired connection is used then the password protection may not be needed.
- EXT SYNC -
ON/OFF** Determines whether or not the unit synchronizes its data collection to the PC's internal time of day clock. When using The Wizard Software the EXT SYNC should be enabled. This guarantees that the PC and remote unit are locked to the same time reference.
- INTERFACE:
MASTER/SLAVE** Selects the configuration of the Unit Interface. The Unit Interface is used to connect to other units in The Wizard System for unified remote operation. Only one unit may have its Unit Interface set to MASTER. The MASTER unit controls the Unit Interface activity.
- CMD TYPE:
ASCII/BELAR** Determines the RS-232 Command type. For normal operation, with the Wizard Software, the command type should be set to "BELAR". For use with the *TVM-230 ASCII RS-232 Interface Commands* in Section 7, set the command type to "ASCII".
- EXIT ?** Pressing the UP PARAMETER button exits the MODIFY OPTIONS submenu and returns the Main Setup Menu.

6-3 MODIFY ID SubMenu Selections

- ID(X):XXXXX
XXXX** The unit ID is a 10 character string used to uniquely identify a unit when it is accessed remotely. The string is set by default to "..TVM-230.." when the unit is shipped. This string may be altered by using the UP PARAMETER button to scroll through the available ASCII characters at the current cursor position. The current cursor position is indicated in parentheses. The cursor position is changed by using the DOWN PARAMETER button.
- EXIT ?** Pressing the UP PARAMETER button exits the MODIFY ID submenu and returns to the Main Setup Menu.

The Wizard System

6-4 UNIT INFO SubMenu Selections

- VERSION X.XX** Indicates the EPROM version installed in the unit.
- SERIAL# 63XXXX** Indicates the units factory serial number.
- EXIT ?** Pressing the UP PARAMETER button exits the UNIT INFO submenu and returns to the Main Setup Menu.

6-5 TEST RELAY/LED SubMenu Selections

- RELAY#X - OPEN/CLOSE** Allows the relays and their associated LEDs to be tested. The relay number being tested is displayed along with its state, either open or closed. The unit is configured so that when a LED is illuminated the relay is closed. The test program will continually cycle the chosen relay open and closed while it turns on and off the corresponding LED. To change the relay/LED being tested press the UP or DOWN PARAMETER button.
- EXIT ?** Pressing the UP PARAMETER button exits the RELAY/LED TEST SubMenu and returns to the Main Setup Menu.

6-6 TEST RS-232 SubMenu Selections

- TRANSMIT \$XX X** The RS-232 test alternately transmits a \$55 and \$AA over the interface. The display shows the byte being transmitted followed by the byte received. If no byte is received a "RECEIVE FAILED" message is displayed. In addition to testing the Rx and Tx lines the test also toggles the DTR on the Tx and reads the CD line on the Rx. The "0" or "1" displayed after the data byte is the current logic state of the DTR or CD line.
- RECEIVE \$XX X**
- RECEIVE FAILED X**
- EXIT ?** Pressing the UP PARAMETER button exits the RS-232 TEST Submenu and returns to the Main Setup Menu.

TVM-230 Digital BTSC TV Stereo Monitor/Analyzer

7 TVM-230 ASCII RS-232 Interface Commands

In order for the ASCII command set to be active the CMD TYPE - ASCII option must be selected. This option is found in the MODIFY OPTIONS section of the SETUP PROGRAM.

'D' - Send Unit Data : Instructs TVM-230 to send back the current value of the specified data. Use the tables below to determine the second character of the command string.

Data Available

- 'A' - Total Peak Max
- 'B' - Stereo Peak Max
- 'C' - Stereo PPM Count
- 'D' - L+R Peak Max
- 'E' - L+R PPM Count
- 'F' - L-R Peak Max
- 'G' - Pilot Injection
- 'H' - Left dB
- 'I' - Right dB
- 'J' - SEP dB
- 'K' - L+R dB
- 'L' - L-R dB
- 'M' - XTALK dB
- 'N' - Total dB
- 'O' - Pilot dB
- 'P' - SUB dB
- 'Q' - Left Peak Max
- 'R' - Right Peak Max
- 'S' - Stereo PPM LED
- 'T' - L + R PPM LED
- 'U' - Pilot LED
- 'V' - Test LED

The command syntax is:

'D' + X: (ASCII character data specifier) + CR: (carriage return)

The unit will send back four ASCII characters, representing the decimal value of the data, terminated with a carriage return.

Note: If the data requested is a dB reading the first digit returned determines the sign. A leading '1' indicates a positive value, while a leading '0' implies a negative value.

Example: Send Total Peak Modulation

Command Sent: 'D' + 'A' + CR:(carriage return)
ASCII Value : \$44 \$41 \$0D

The Wizard System

Data Returned(assume total peak = 100%): '0100' + CR
ASCII Value : \$30 \$31 \$30 \$30 \$0D

'C' - Send Unit Configuration : Instructs TVM-230 to send back the current setting of the specified parameter. Use the tables below to determine the second character of the command string.

Parameters Available

'A' - Hold Time
'B' - Time Mode
'C' - Infinite
'D' - Mode
'E' - dbx
'F' - Input Select
'G' - Sync Detect
'H' - De-Emphasis
'I' - SAP
'J' - PRO
'K' - Stereo PPM Peak
'L' - Stereo PPM Threshold
'M' - Stereo PPM Duration
'N' - L + R PPM Peak
'O' - L + R PPM Threshold
'P' - L + R PPM Duration

The command syntax is:

'C' + X : (ASCII character parameter specifier) + CR : (carriage return)

The unit will send back four ASCII characters, representing the decimal value of the parameter, terminated with a carriage return.

Example: Send Time Mode

Command Sent : 'C' + 'B' + CR: (carriage return)
ASCII Value : \$43 \$42 \$0D

Data Returned (assume Time Mode = Past) : '0001' + CR
ASCII Value : \$30 \$30 \$30 \$31 \$0D

TVM-230 Digital BTSC TV Stereo Monitor/Analyzer

'A' - Alter Unit Configuration : Instructs TVM-230 to change the value the specified parameter. Use the tables below to determine the second character of the command string.

Parameters Available

'A' - Hold Time
'B' - Time Mode
'C' - Infinite
'D' - Mode
'E' - dbx
'F' - Input Select
'G' - Sync Detect
'H' - De-Emphasis
'I' - SAP
'J' - PRO
'K' - Stereo PPM Peak
'L' - Stereo PPM Threshold
'M' - Stereo PPM Duration
'N' - L + R PPM Peak
'O' - L + R PPM Threshold
'P' - L + R PPM Duration

The command syntax is:

'A' + X : (ASCII character parameter specifier)
 + XXXX : (ASCII parameter data 1st digit = thousands
 2nd digit = hundreds
 3rd digit = tens
 4th digit = ones)
 + CR : (carriage return)

The unit will send back four ASCII characters, representing the decimal value of the updated parameter, terminated with a carriage return.

Example: Alter Time Mode

Command Sent : 'A' + 'B' + '0001' + CR : (carriage return)
ASCII Value : \$41 \$42 \$30 \$30 \$30 \$31 \$0D

Data Returned (assume Time Mode = Past) : '0001' + CR
ASCII Value : \$30 \$30 \$30 \$31 \$0D

The Wizard System

UNIT DATA DEFINITIONS:

Data	High	Low	Increments
Total Peak Max	127	0	1%
Stereo Peak Max	127	0	1%
Stereo PPM Count	6000	0	1

L + R PPM Peak	127	1	1%

8 Diagrams, Schematics and Parts Lists

Replaceable Parts. This page contains information for ordering replaceable parts for the monitor. The tables that follow list the parts in alphanumeric order by reference designation and provides a description of the part with the Belar part number.

Ordering Information. To order a replacement part from Belar, address the order or inquiry to Belar and supply the following information:

- a. Model number and serial number of unit.
- b. Description of part, *including the reference designation and location.*

Orders may also be taken over the telephone. Parts orders can be put on your VISA, MasterCard, or American Express card, or we can ship them COD.

Appendix A: Using The Wizard Software

Getting Started

Using The Wizard Software any Belar Monitor equipped with an RS-232 Port can be operated from any IBM-compatible personal computer, either through a direct connection (on-site) or from any distance via telephone/modem connection. It can also control other Belar units connected to it using The Wizard Interface. With The Wizard Interface multiple units in a series can be accessed remotely using a single RS-232 port.

Direct Connection

Equipment Required:

- The Wizard Software.
- An IBM compatible PC with an RS-232C serial (COM) port.
- An RS-232 cable with a 9 pin female D-connector at one end (for the Belar unit) and the appropriate connector for your computer (generally either a 9 or 25 pin female D-connector). For direct connection to a PC, only a three wire connection is actually needed: Rx, TX and GND. The various cable pinouts are below; your computer manual may also offer helpful information.

Generally, the RS-232 cable for direct connection is referred to as a "null modem" cable. For your convenience, the proper pin-out follows:

Pinout for Direct Connection (if your computer has a 9-pin D connector serial port):

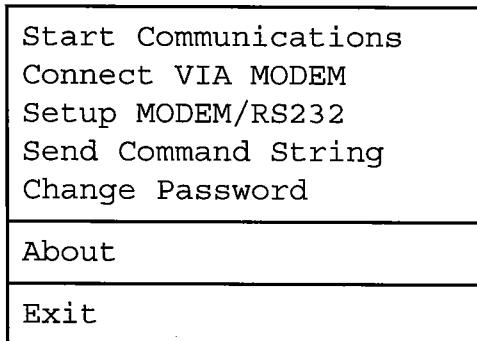

<u>PC</u>	<====>	<u>Belar Unit</u>
2 - Rx	<==	3 - Tx
3 - Tx	==>	2 - Rx
5 - GND	<====>	5 - GND

Pinout for Direct Connection (if your computer has a 25-pin D connector serial port):

<u>PC</u>	<u><==></u>	<u>Belar Unit</u>
3 - Rx	<==	3 - Tx
2 - Tx	==>	2 - Rx
7 - GND	<==>	5 - GND

Procedure:

1. Connect one end of your RS-232 cable to the port on the back of the unit labeled "RS232", and connect the other end to the RS-232 (COM) port of your personal computer.
2. For safety's sake, if you plan to run The Wizard Software directly from the floppy disk, make a backup copy first and store the original in a safe place.
Alternatively, copy The Wizard software to your hard disk, preferably in its own subdirectory (we suggest C:\WIZ).
3. From the **A>** or **C:\WIZ>** prompt, type **WIZ** and press **Enter**. Once the software has been started, pressing **F1** will bring up context-sensitive help.
4. Using the mouse, select the **Communications** menu from the top of the screen. If you do not have a mouse, press Alt-C. A drop-down menu will appear:

Select **Setup Modem/RS232** (using the arrow keys) and press **Enter**. Using the arrow and tab keys, configure your computer to the proper COM port, IRQ, and speed. Press **F1** in this screen for more information on any of these selections. Once you have made the selections, select Start Communications to establish a connection to the unit. The unit comes configured from the factory with a Supervisor password of **BELAR3**.

Connection via Modem

Equipment Required:

- The Wizard Software.
- An IBM compatible computer with at least a 1200 baud (preferably 2400 baud or greater) Hayes-compatible modem, internal or external.
- An external 1200 or 2400 baud external modem (for connection to the unit), set up as described below.
- An RS-232 cable with a 9 pin female D-connector at one end (for the unit) and the appropriate connector for your external modem (generally either a 9 or 25 pin female D-connector). For reliable external modem operation all five lines from the unit's RS-232C connector should be used. The pinout of this cable follows.
- A telephone line for connecting the two modems.

Pinout for Modem connection (25-pin D connector serial port at modem):

<u>PC</u>	<u><==></u>	<u>Belar Unit</u>
2 - Rx	<==	3 - Tx
3 - Tx	==>	2 - Rx
7 - GND	<==>	5 - GND
8 - CD	==>	1 - CD
20 - DTR	<==	4 - DTR

External Modem Setup:

Most external modems have non-volatile memory for storing configuration information. In order to configure the modem to work with the unit you must have a computer with a RS-232 port and some kind of communications software or other way of communicating with your modem. Connect the external modem to the computer using the appropriate cable and access it using your communications software. Using the appropriate AT commands set up the modem to do the following:

AT command Description

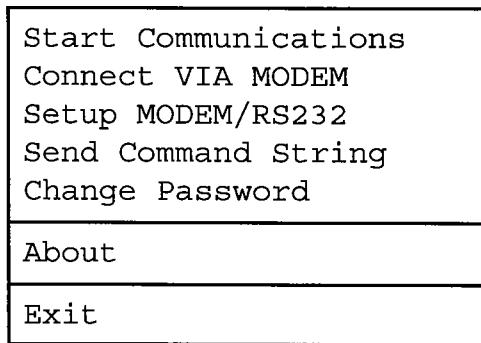

ATS0=n Puts modem in Auto-Answer mode, where "n" is the number of rings desired before the call will be answered. Note: "n" cannot equal 0 (we suggest n=1).

AT&C1	Carrier Detect (CD) active during connect.
AT&D3	Data Terminal Ready (DTR) disconnect and reset.
AT&W0	Writes user configuration to non-volatile memory.

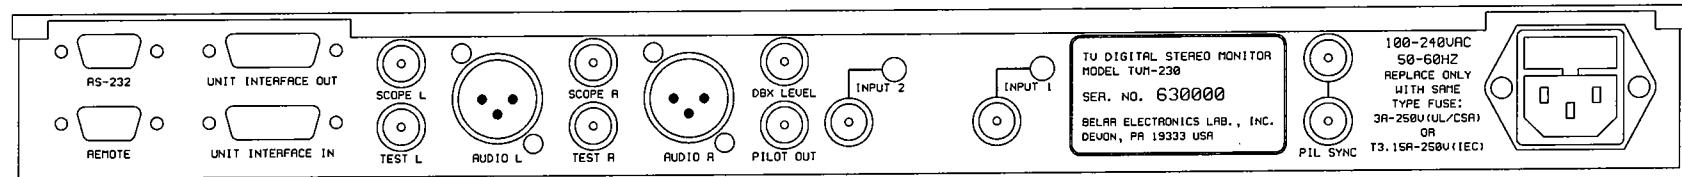

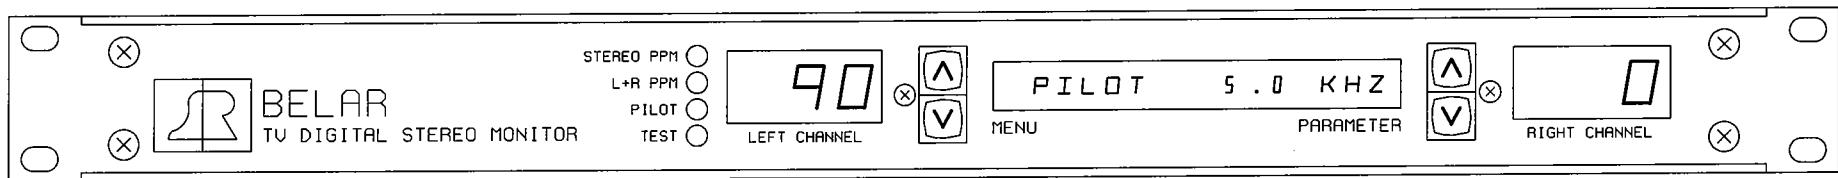

Some modems have various data compression schemes to increase the apparent speed under certain circumstances. Be sure to configure your modem to disable such compression schemes. Refer to your modem and communication software manuals if you encounter problems.

Procedure:

1. For safety's sake, if you plan to run The Wizard software directly from the floppy disk, make a backup copy first and store the original in a safe place.
Alternatively, copy The Wizard software to your hard disk, preferably in its own subdirectory (we suggest C:\WIZ).
2. From the A> or C:\WIZ> prompt, type **WIZ** and press **Enter**. The Wizard front panel will appear in the lower half of your screen.
3. Using the mouse, select the **Communications** menu from the top of the screen. If you do not have a mouse, press Alt-C. A drop-down menu will appear:

Select **Setup Modem/RS232** (using the arrow keys) and press **Enter**. Using the arrow and tab keys, configure your computer to the proper COM port, IRQ, speed, and telephone number(s). Press **F1** in this screen for more information on any of these selections. Once you have made the selections, select **Connect VIA MODEM** to instruct your modem to dial up the modem at the remote unit and established a connection. The unit comes configured from the factory with a Supervisor password of **BELAR3**.

MP-230 CALIBRATION: FEED A 1KHZ AUDIO SIGNAL INTO THE TVM-230 COMPOSITE INPUT. ADJUST THE LEVEL OF THE AUDIO SO THAT THE LEFT AND RIGHT CHANNEL DISPLAYS ON THE TVM-230 READ 100%. DEPRESS THE "LEFT" AND "RIGHT" METER PANEL PUSHBUTTONS THEN ADJUST POTENTIOMETERS R1 AND R7 ON THE REAR OF THE MP-230 SO THE REMOTE METERS ALSO READ 100%.

NOTES:
1. METERS ARE SHOWN FROM REAR.
2. SCHEMATIC SHOWS MP-230 CABLE.

MP-230 LINE VOLTAGE SELECTION PROCEDURE

1. Unplug line cord.
2. Open fuse compartment door.
3. Move fuse pull lever to left to remove fuse. Leave fuse pull lever in the leftmost position.
4. Using needle nose pliers, pull the voltage select board straight out of the power entry module.
5. While facing the rear of the unit, orient the voltage select board so the desired line voltage is up and reads correctly ("120" for 115Vac operation, "240" for 230Vac operation).
Note: The "100" and "220" positions on the opposite side of the board are not used.
6. Plug the voltage select board into the power entry module.
7. Install the fuse (F1).
8. Close fuse compartment door.
9. Plug line cord in.
